

# THE LEADING TOPIC OF THE DAY! PICKETT'S PATENT AUTOMATIC TRESTLE!

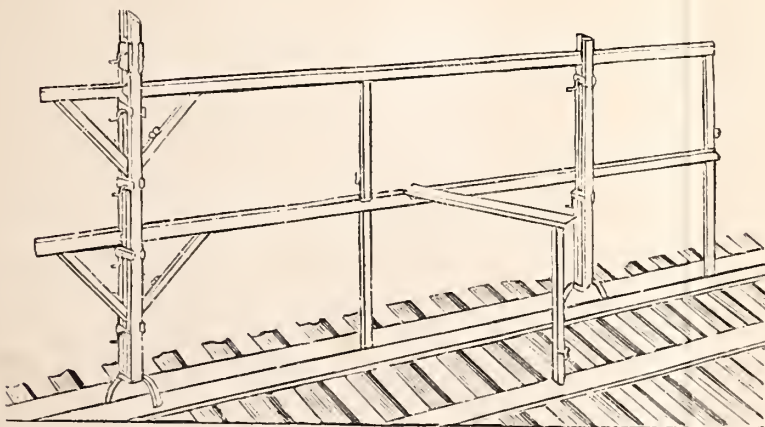

Pronounced by all who have seen it to be the Finest construction of the kind known.  
Having every necessary improvement.

Its chief attraction is the readiness with which it is erected without the use of Nails. The main Rail or Extension can be so adjusted as to extend from 10 to 14 ft. as desired, being all that is necessary for any building.

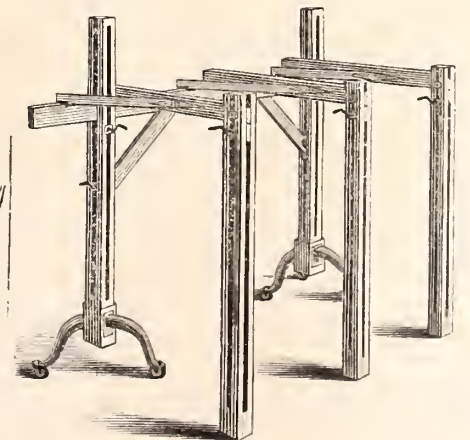

The above figures represent the exact position of the Plastering Trestle when erected on six uprights. The Figure No. 1, giving an **End View**, and No. 2, giving the **Side View**. The Trestle as erected on Automatic uprights, has for its necessary use, five extension rails, which are adjustable. These five rails can act on four automatic uprights, instead of six, as shown in the figure. The uprights on each end of the rails are attached by side lashes, which are connected with the uprights by the use of **King Bolts**, to make steady the Trestle. The side lashes being so attached to the uprights as to be always in the required position, ready for use. In fitting up Mills or moving Machinery this Trestle is unequalled—extending from 3 ft. wide to 14 feet long, when erected. Have also an excellent Trestle for cleaning Rotundas, which can be erected in 6 feet stories—the entire height 36 ft and 64 ft wide. The plastering Trestle is also supported in the center by an adjustable upright, so as to make it equal if not superior to the Bricklayers' Trestle. This upright is 6 feet 3 in. high, but is so arranged as to extend to 10 ft. 7 in. high.

**Brick-layers' Trestle.**

**Figure No. 1**, represents the exact construction of the Brick-layers' Trestle, 32 ft. long, supported by a complete number of uprights and pudlocks, necessary to its use. In erecting the Brick-layers' Trestle both rails are made secure by the use of a dog, which is confined by a movable thumb-screw.

**Figure No. 2**, represents the exact construction of the Chimney Trestle, which only those who use it can comprehend its great usefulness. It has three uprights and three pudlocks, all being automatic. Farmers pronounce it the finest article known in their Orchards, for **Gathering Fruit**, and all such purposes, varying in height according to the desire of the user.

**Chimney Trestle.**

The above described Trestles are manufactured and ready for use, and on exhibition at  
**PICKETTS' Manufacturing Establishment, 126 North Main St., Akron, O.,**  
**Over Dick & Miles.**

Parties desiring to Build on a Royalty are invited to call immediately.
